

Shy Panda

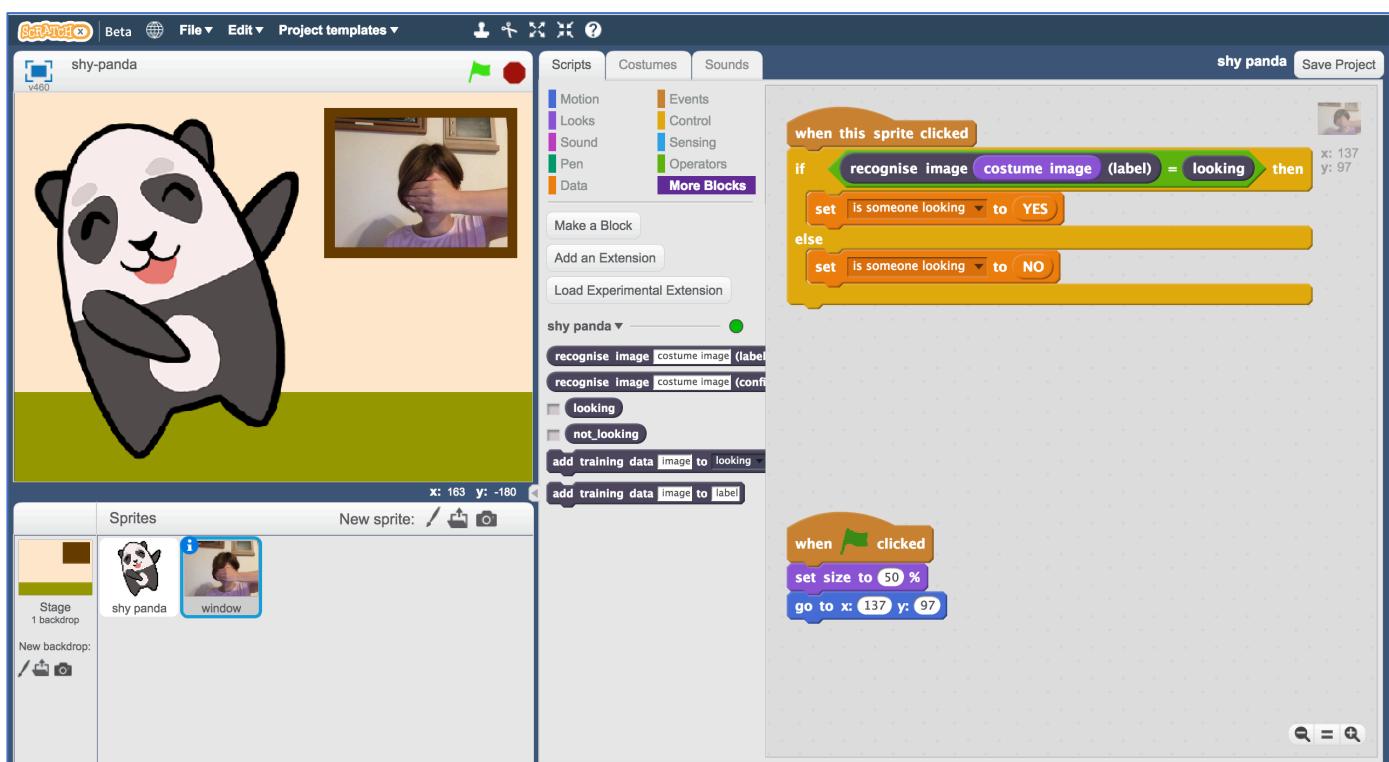

In this project you will make a dancing panda.

It'll be a shy panda, that will get embarrassed and stop dancing if it sees you looking in through the window.

You'll train it so that if you cover your eyes, it'll recognise that you're not looking and keep dancing.

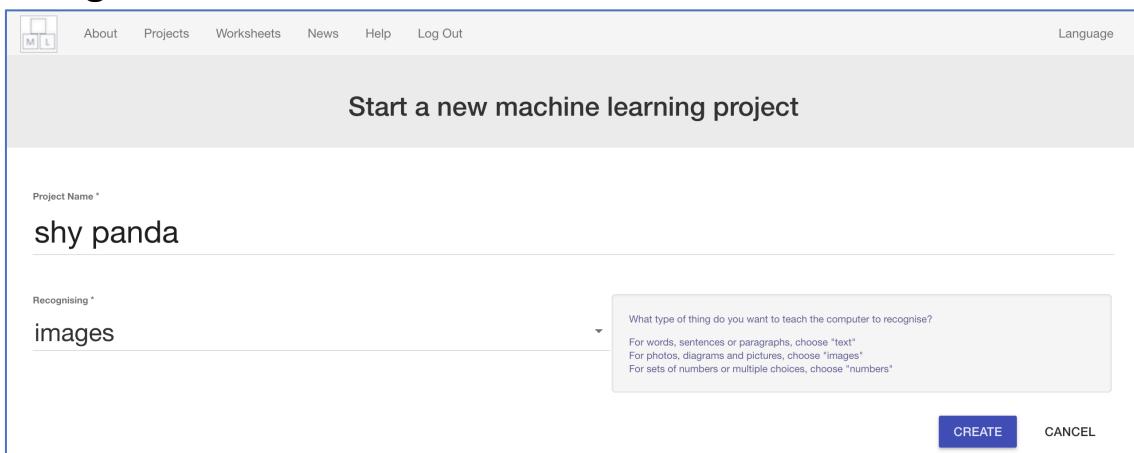

The idea for this project came from Cassie Evans. You can see her version of it at
<https://codepen.io/cassie-codes/pen/jKaVqo>

The panda artwork in this project was by Ed Moffatt from XMPT Games.

- 1.** Go to <https://machinelearningforkids.co.uk/> in a web browser
- 2.** Click on “**Get started**”
- 3.** Click on “**Log In**” and type in your username and password
*If you don't have a username, ask your teacher to create one for you.
If you can't remember your password, ask your teacher to reset it for you.*
- 4.** Click on “**Projects**” on the top menu bar
- 5.** Click the “**+ Add a new project**” button.
- 6.** Name your project “shy panda” and set it to learn how to recognise “images”. Click the “**Create**” button

Your machine learning projects

shy panda
Recognising **images**

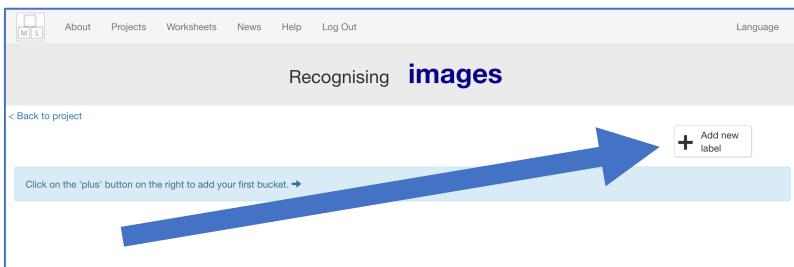

face lock
Recognising **images** as **Granted or denied**

+ Add a new project

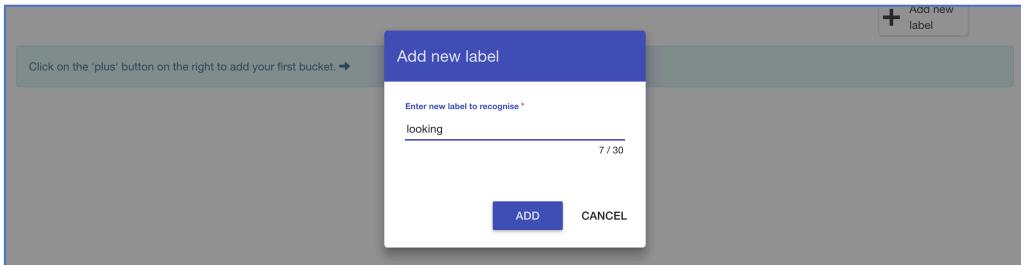

8. Click the Train button

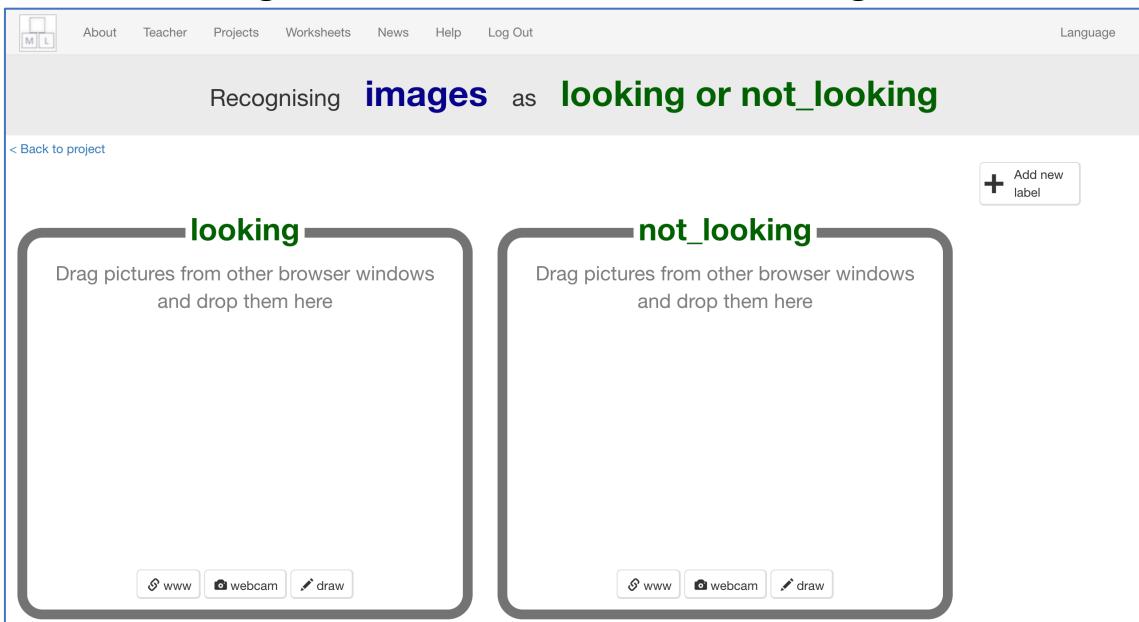

9. Click "+ Add new label"

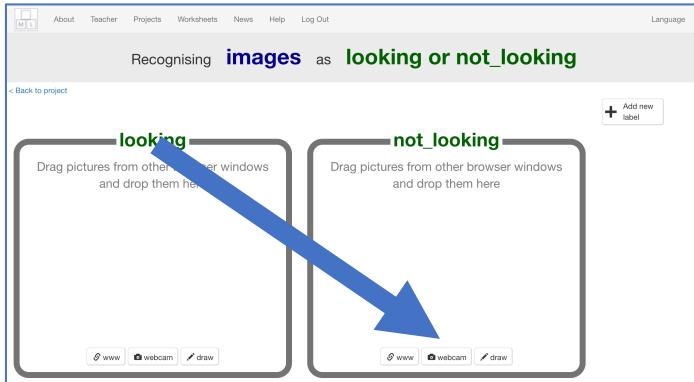

10. Type in "looking", and press Add

11. Do that again, but this time add "not looking"

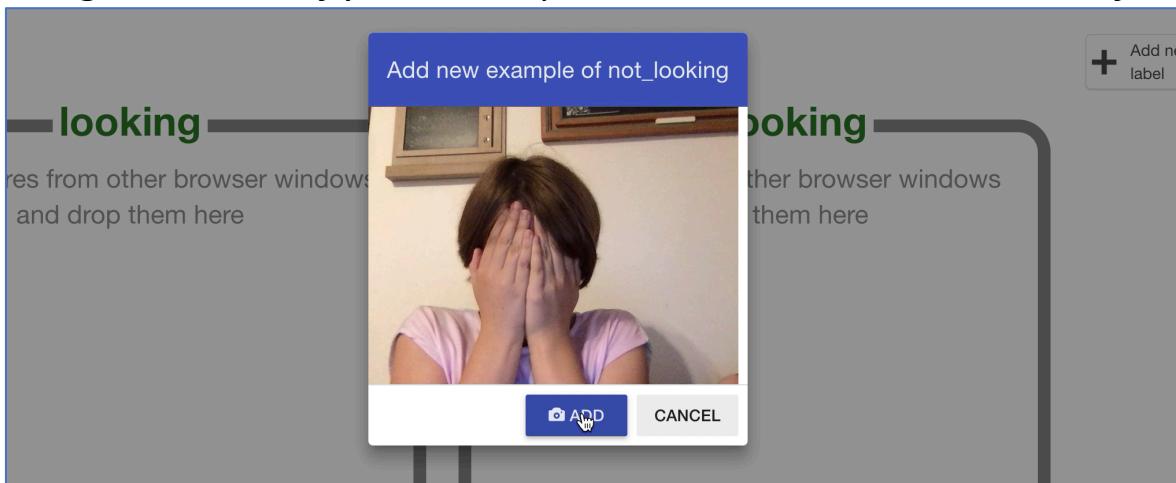

12. Click on the “webcam” button in the “not looking” bucket

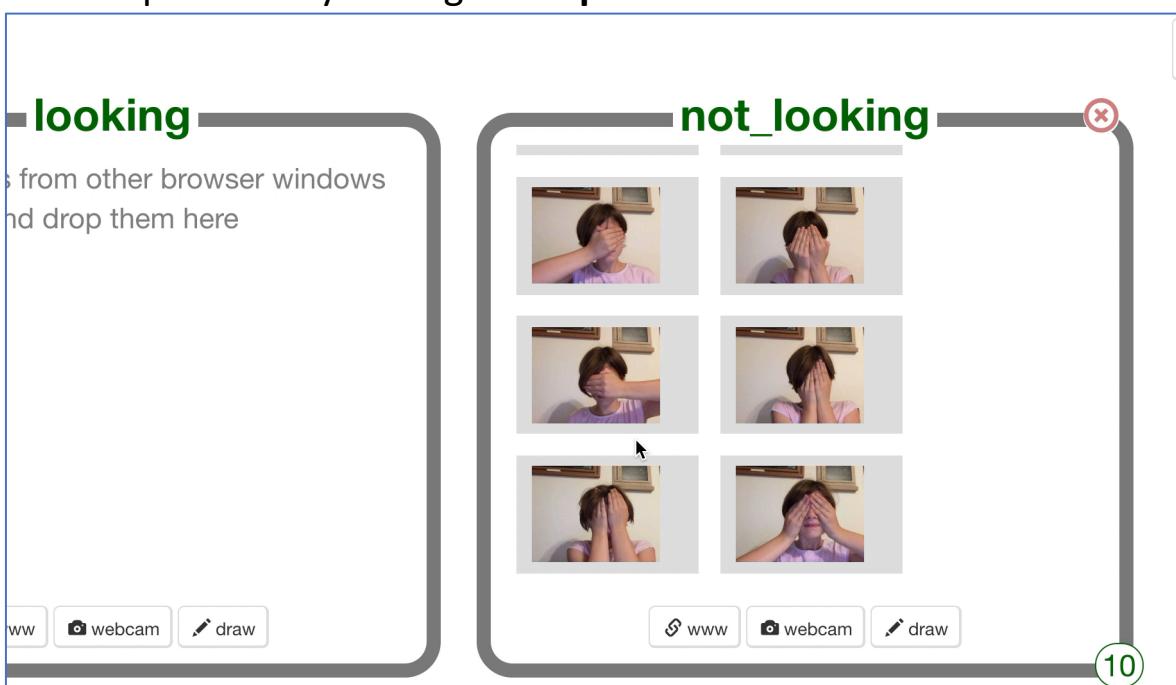

13. Cover your face with your hands, and take a photo

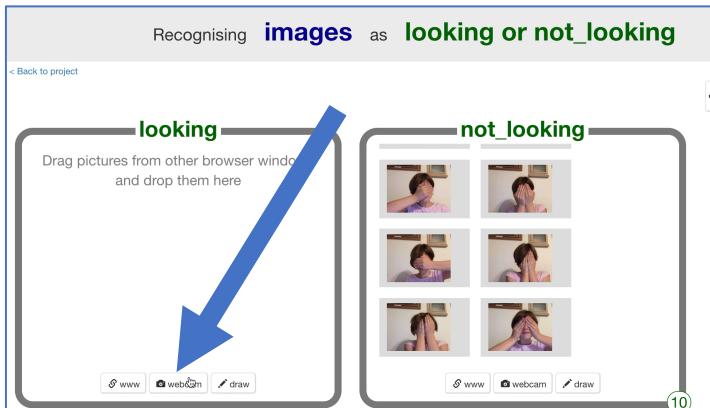

It might be easier if you have a partner to click the “Add” button for you!

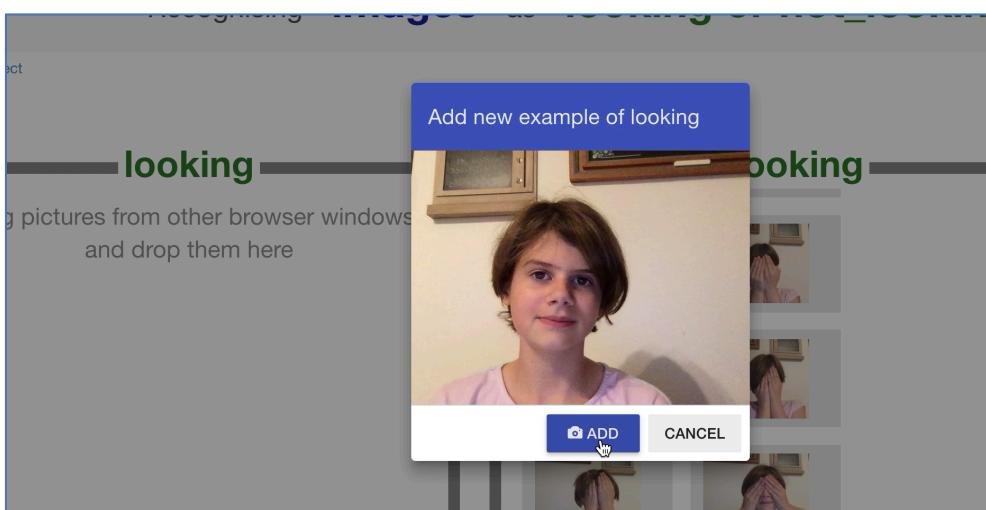

14. Repeat until you've got ten photos like this

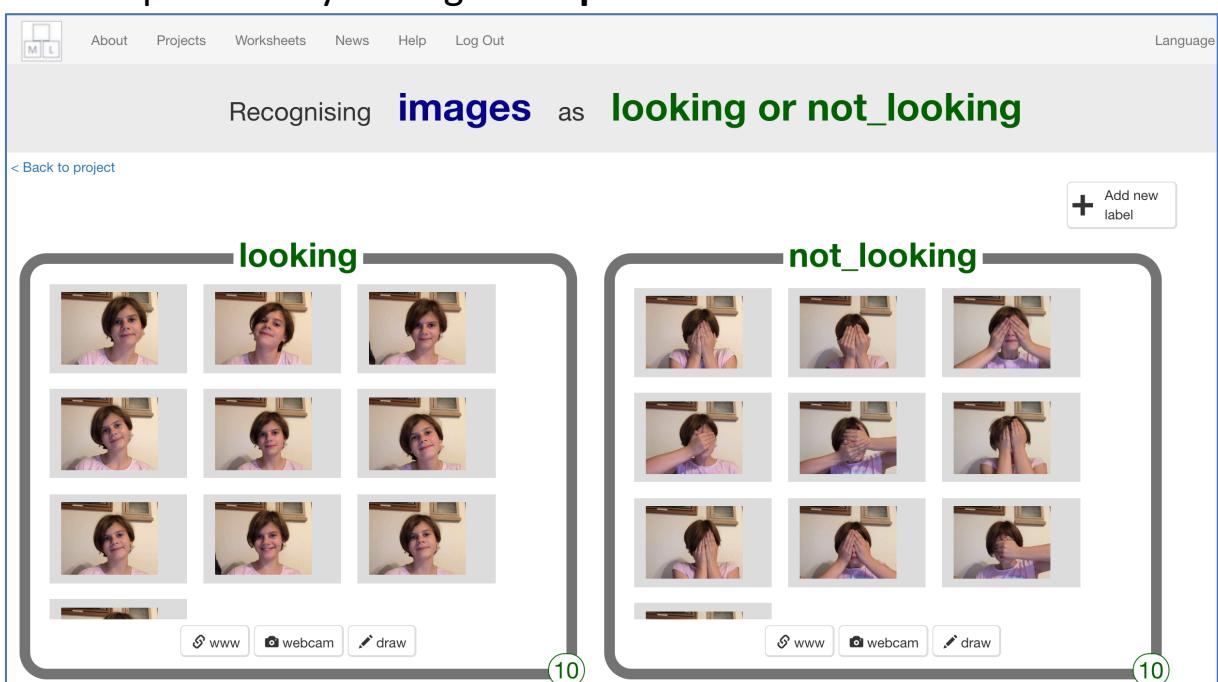

15. Click the “webcam” button in the “looking” bucket

16. Look at the camera and click “Add”

17. Repeat until you've got ten photos like this

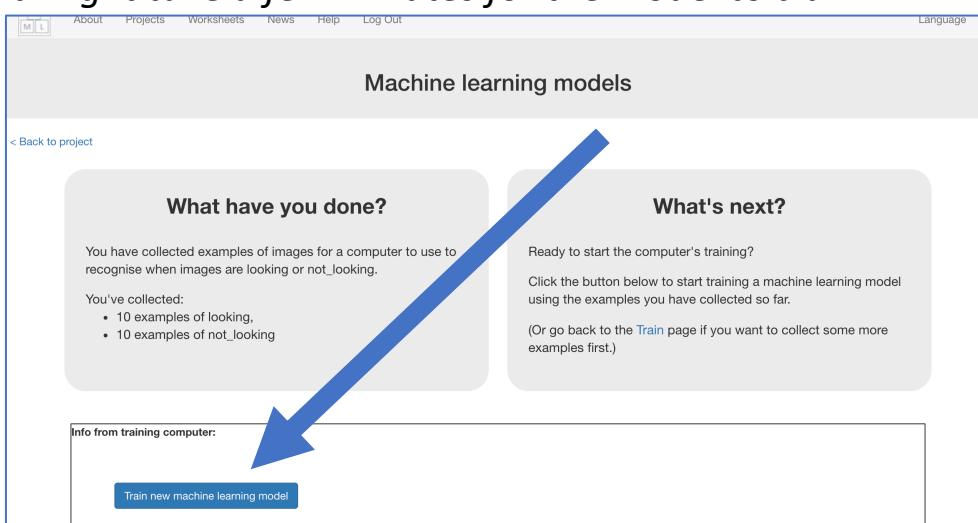

18. Click “< Back to project”

19. Click **Learn & Test**

20. Click the “**Train new machine learning model**” button

It might take a few minutes for the model to train.

What have you done so far?

You've started to train a computer to recognise whether photos of a face and photos of a covered face. You are doing it by taking example photos. These examples are being used to train a machine learning “model”.

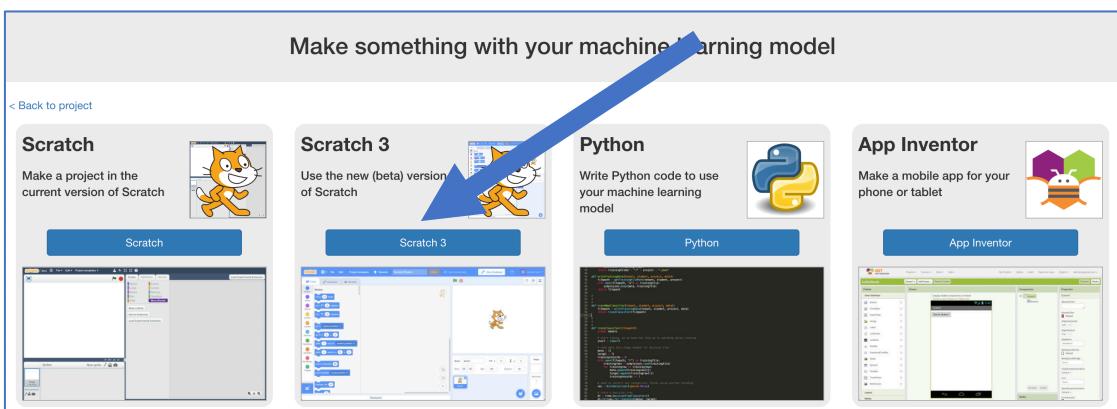

This is called “supervised learning” because of the way you are supervising the computer’s training.

The computer will learn from patterns in the shapes from each of the photos you’ve given it. These will be used to recognise new photos.

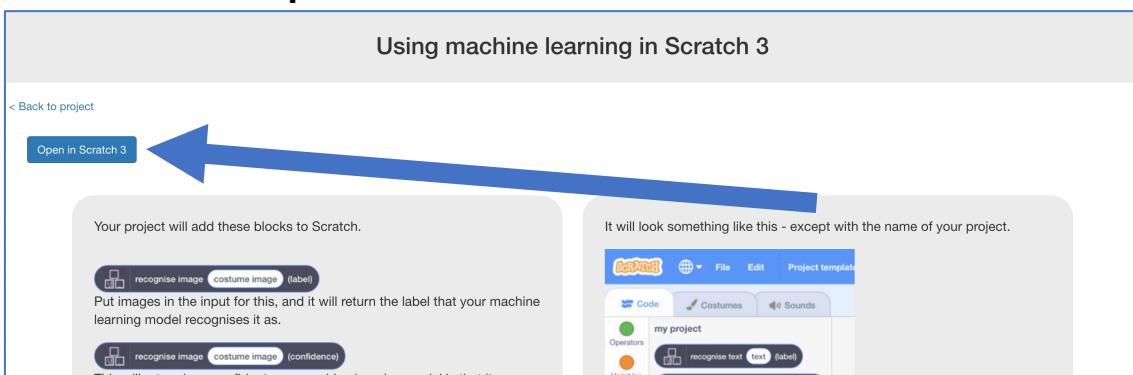

21. Click “< Back to project”

22. Click the “Make” button

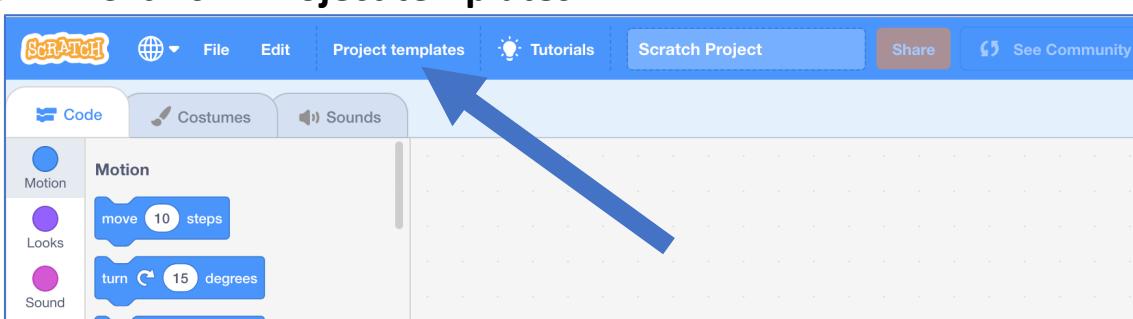

23. Click “Scratch 3”

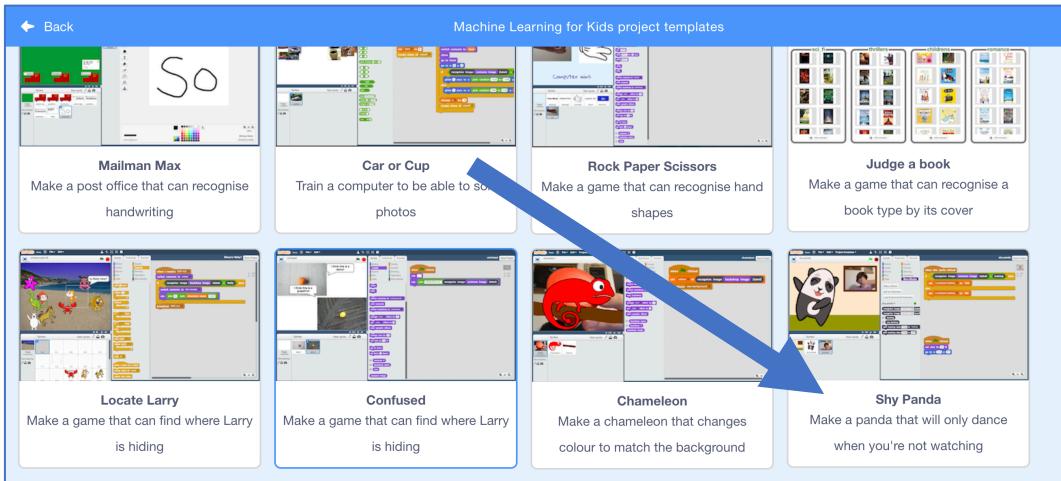

24. Click on “Open in Scratch 3”

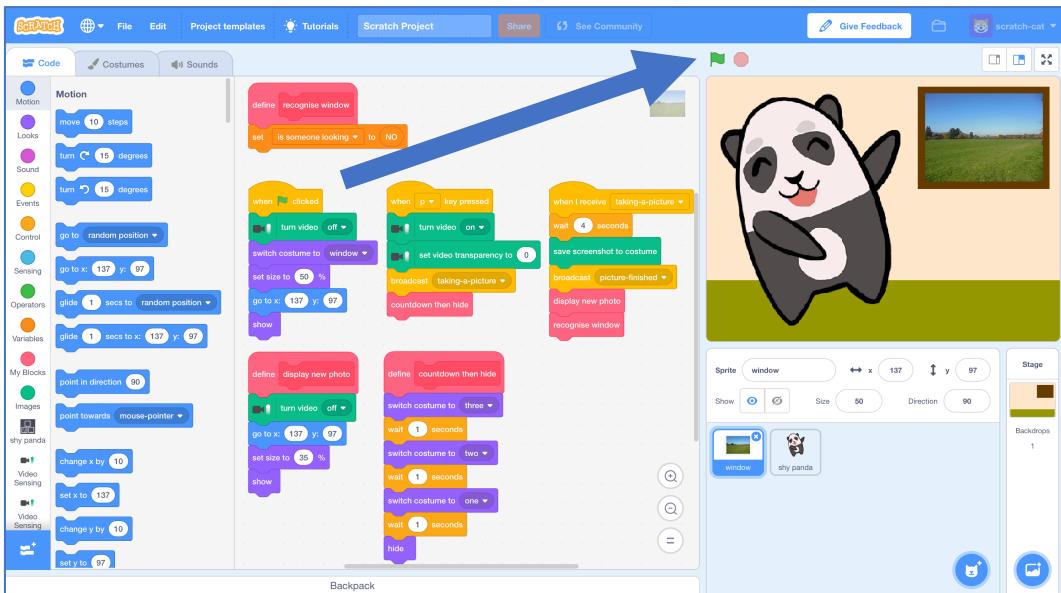

25. Click on “Project templates”

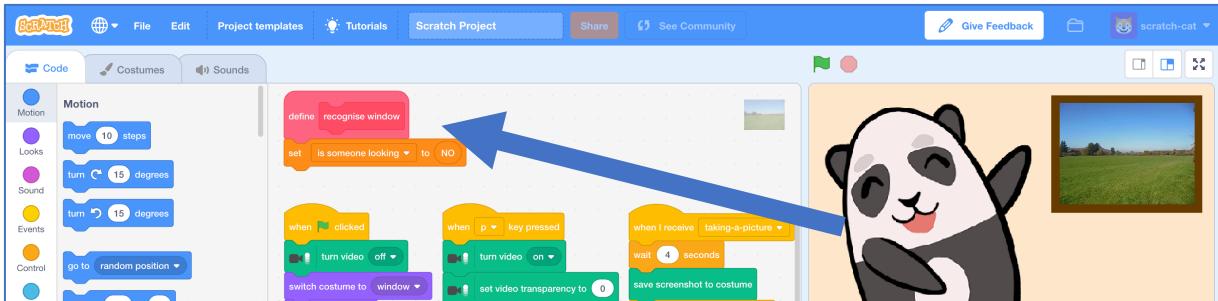

26. Click on the “Shy Panda” template
You might need to scroll down to it
If your browser asks for permission to use the web-cam, click Allow

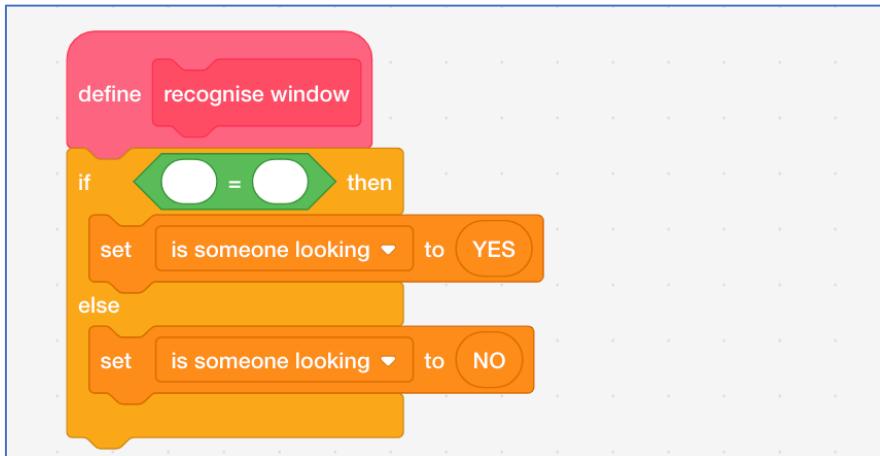

27. Click on the Green Flag to see the panda dance!
Click the red stop button before moving to the next step.

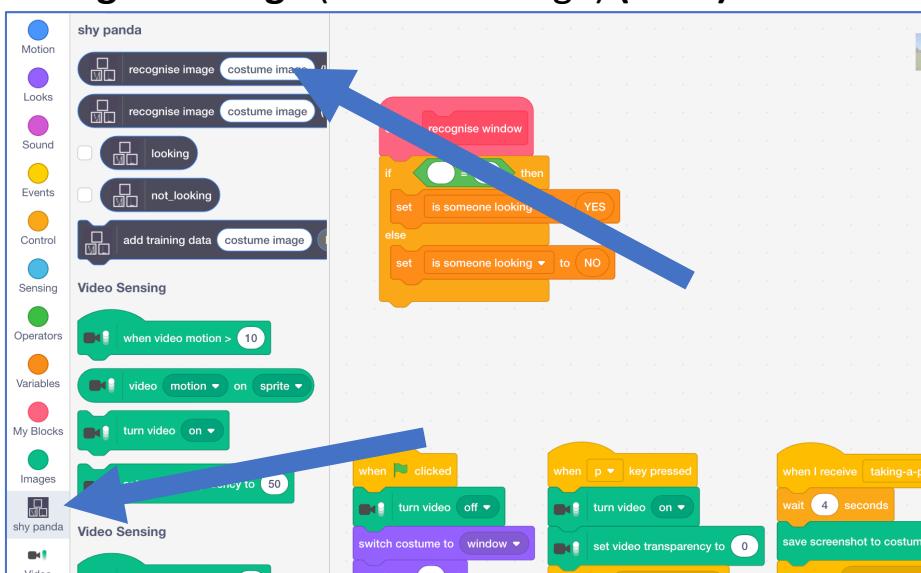

28. Find the “recognise window” script in the “window” sprite

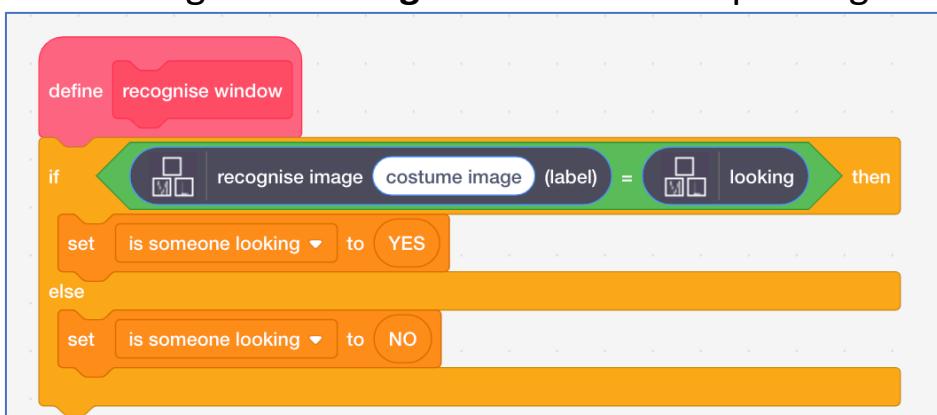

29. Change the “**recognise window**” script so that it looks like this
*If you’re new to Scratch 3, don’t worry as it’s very similar to Scratch 2.
Scroll through blocks in the toolbox on the left to find the blocks you need.*

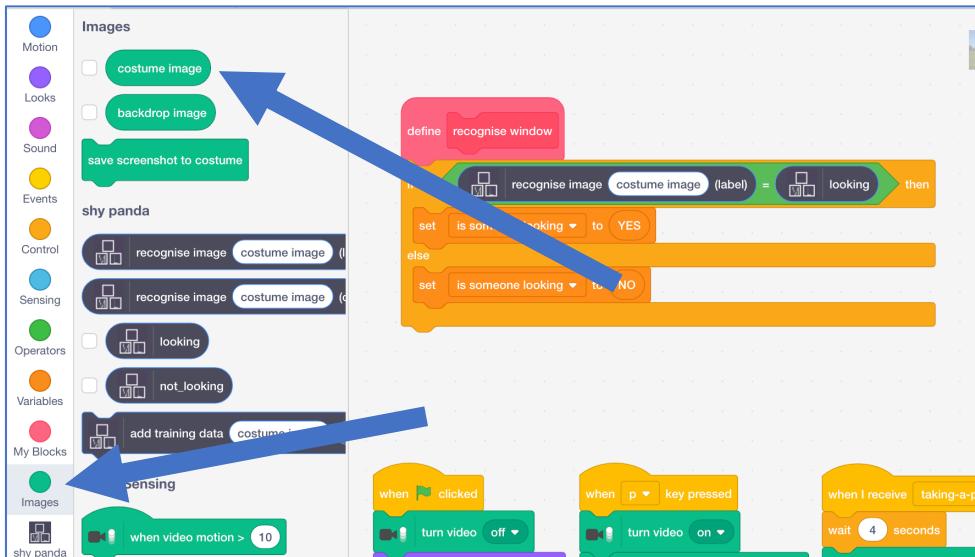

30. Click on “shy panda” in the toolbox and then find the “**“recognise image (costume image) (label)**” block

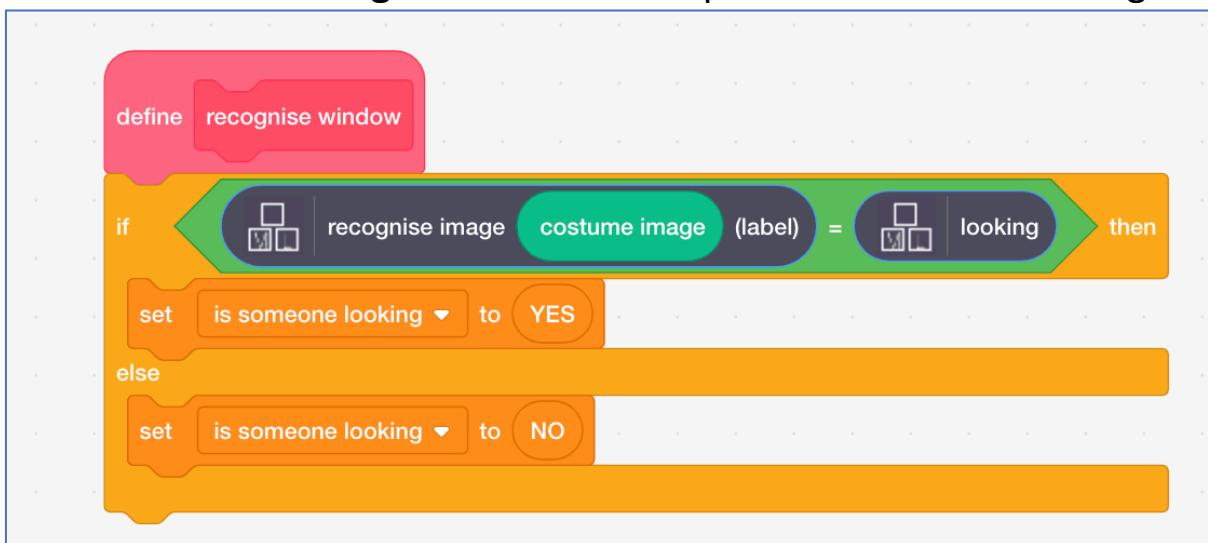

31. Change the “**“recognise window”** script using “**shy panda**” blocks

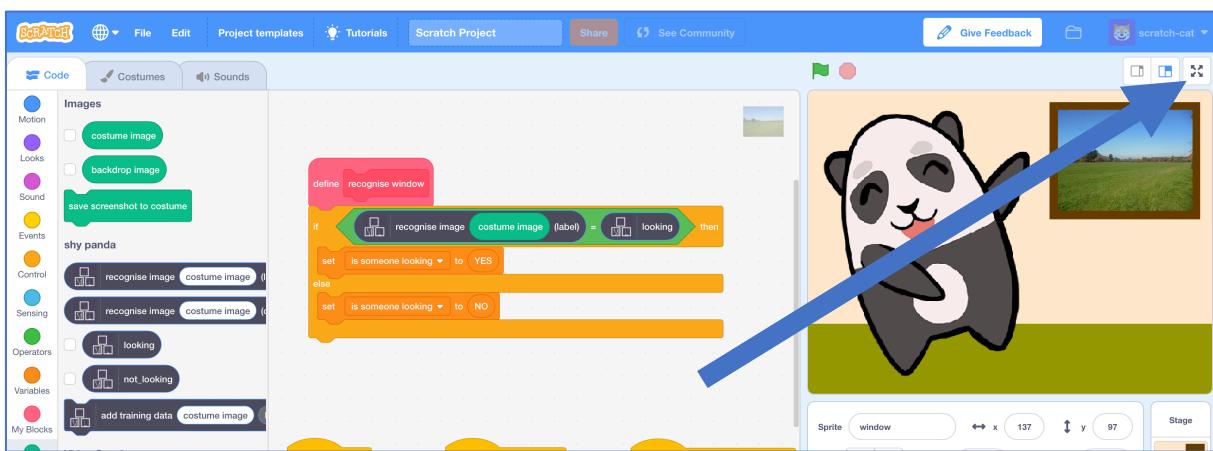

32. Click “images” in the toolbox and find the “costume image” block

33. Finish the “recognise window” script with the costume image block

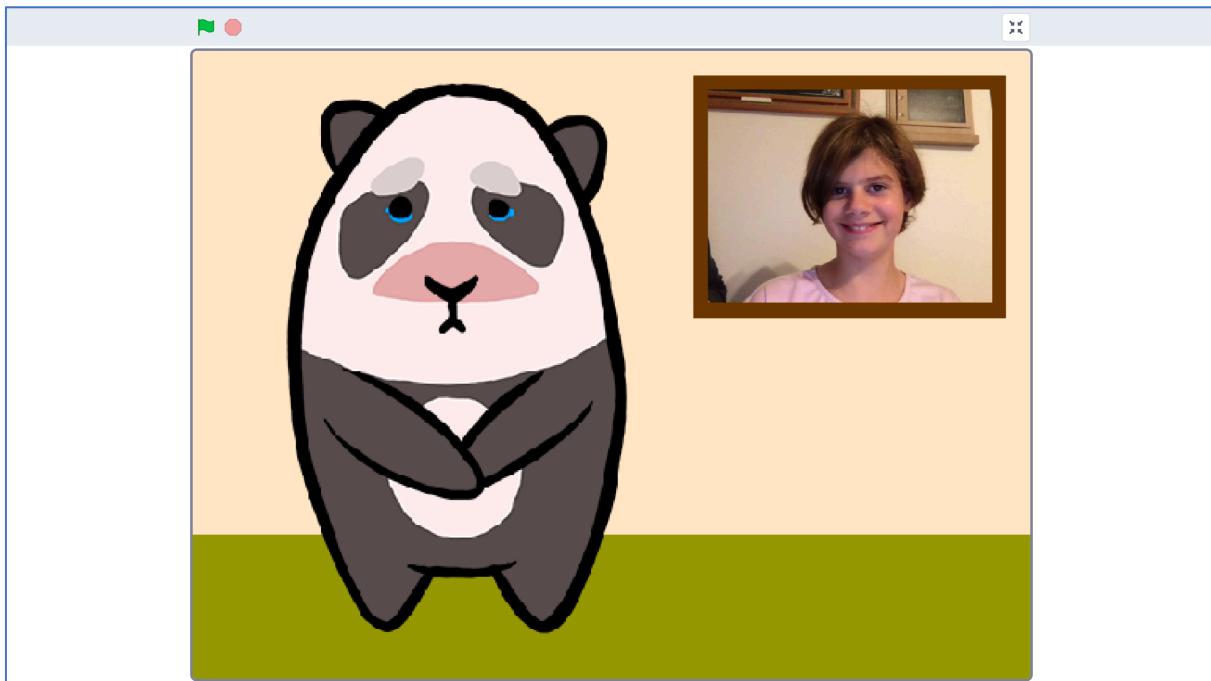

34. Click the full-screen button

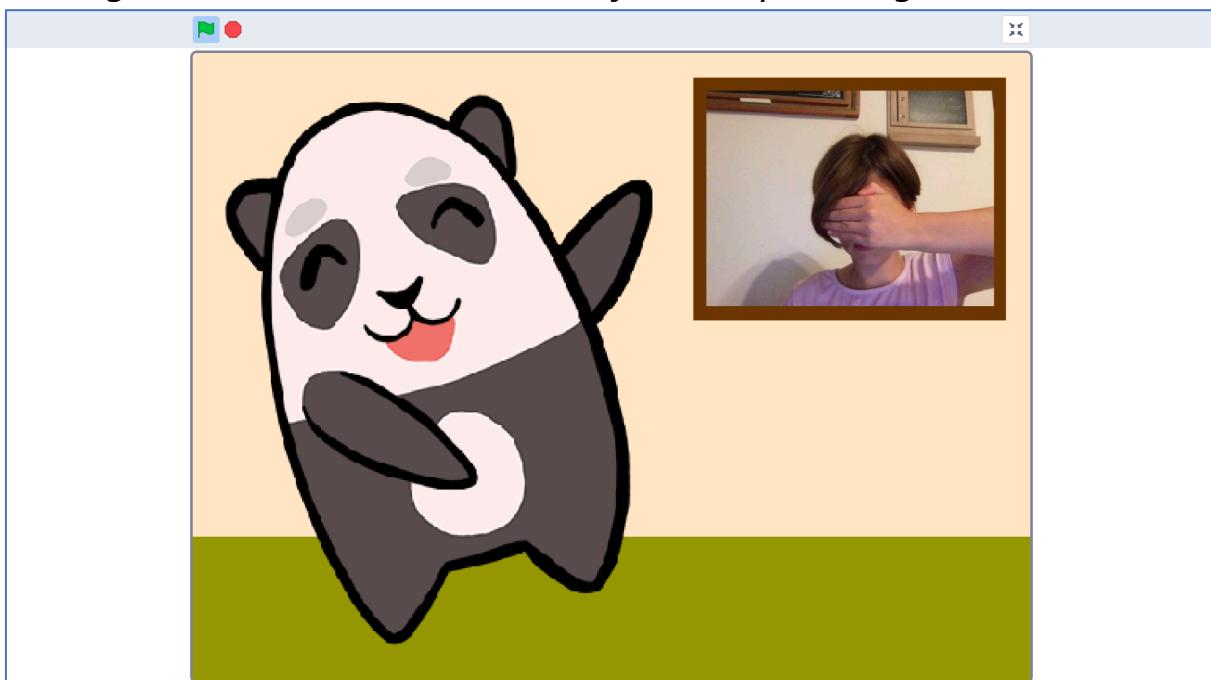

35. Click the **Green Flag** to start the panda dancing again

36. Press “**P**” on your keyboard to take a picture of yourself looking in
You'll get a 3-second countdown before the photo is taken
If your machine learning model recognises the photo as “looking”, the panda should stop dancing and look embarrassed!

37. Press “**P**” again to take a second photo. This time cover your face.
You'll get a 3-second countdown before the photo again.

38. The panda should start dancing again, as your machine learning model will recognise that you're not looking.

39. Save your project

Click the full-screen button again

Click “File” -> “Save to your computer”

What have you done?

You've created a shy panda in Scratch that uses machine learning to recognise whether the view at the window is a picture of you looking in.

The machine learning model that you've trained is an image classifier, that is able to classify photos as one of two classes – either looking or not looking.

The more examples you give it, the better it should get at recognising whether or not you're looking at it.

Ideas and Extensions

Now that you've finished, why not give one of these ideas a try?

Or come up with one of your own?

Draw your own character

You don't have to use the panda in the project template. Why not draw your own character? You'll need two sprites to be able to animate it dancing, and a third sprite of it looking shy.

Improving your training

Try testing it with your classmates. Does the panda still behave correctly?

What about if there's no one there at all?

How can you improve the training so that the panda does the right thing for these sorts of cases?
