

Shy Panda

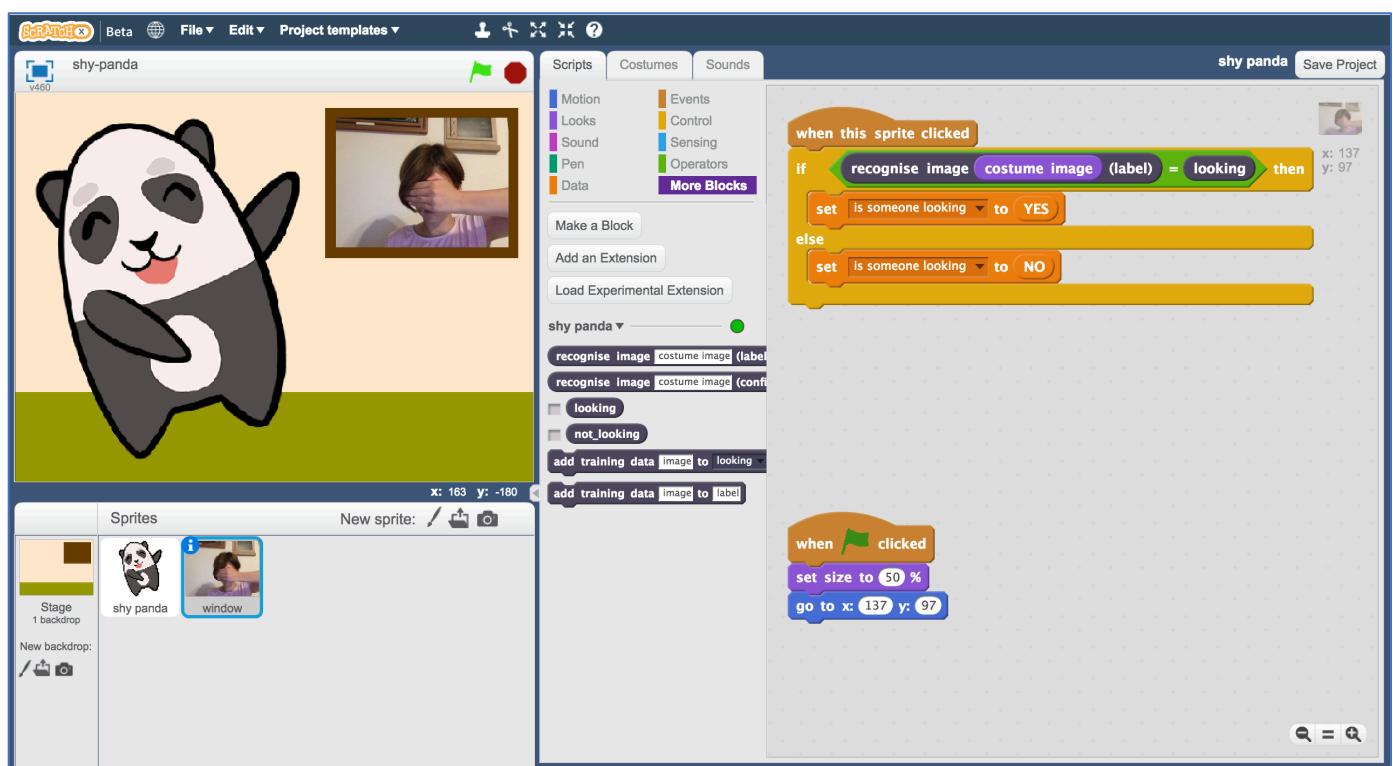

In this project you will make a dancing panda.

It'll be a shy panda, that will get embarrassed and stop dancing if it sees you looking in through the window.

You'll train it so that if you cover your eyes, it'll recognise that you're not looking and keep dancing.

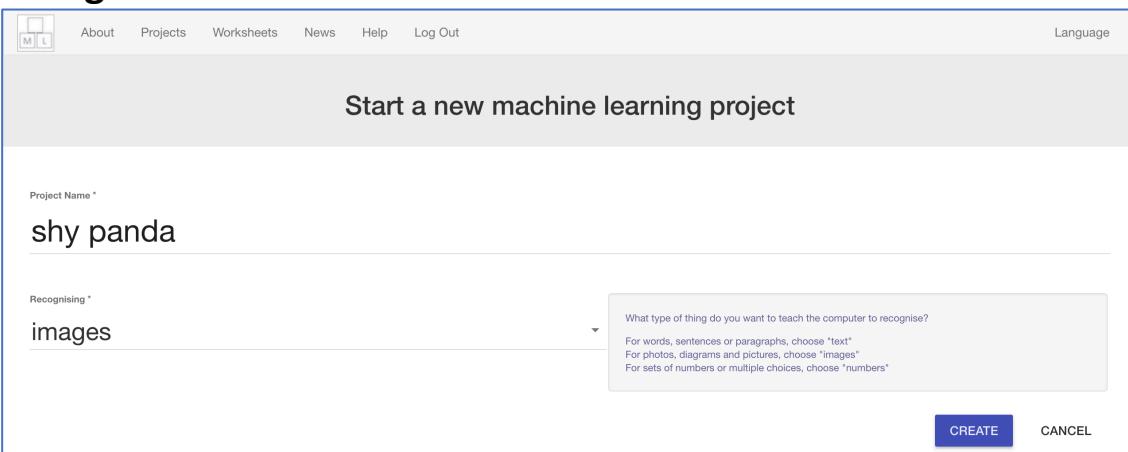

The idea for this project came from Cassie Evans. You can see her version of it at
<https://codepen.io/cassie-codes/pen/jKaVqo>

The panda artwork in this project was by Ed Moffatt from XMPT Games.

- 1.** Go to <https://machinelearningforkids.co.uk/> in a web browser
- 2.** Click on “**Get started**”
- 3.** Click on “**Log In**” and type in your username and password
*If you don't have a username, ask your teacher to create one for you.
If you can't remember your password, ask your teacher to reset it for you.*
- 4.** Click on “**Projects**” on the top menu bar
- 5.** Click the “**+ Add a new project**” button.
- 6.** Name your project “shy panda” and set it to learn how to recognise “**images**”. Click the “**Create**” button

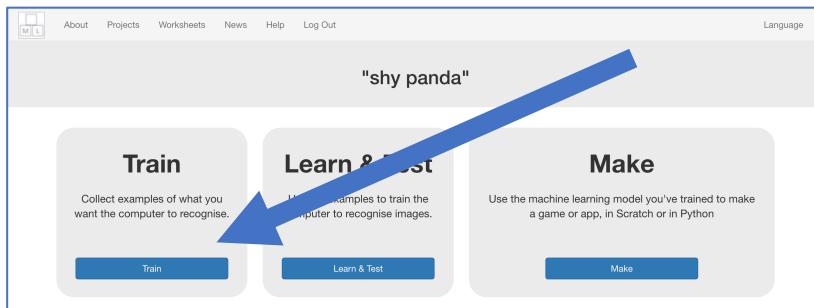

The screenshot shows a web page titled "Start a new machine learning project". At the top, there is a navigation bar with links for "About", "Projects", "Worksheets", "News", "Help", "Log Out", and "Language". Below the title, there are two input fields: "Project Name *" containing "shy panda" and "Recognising *" containing "images". To the right of these fields is a dropdown menu with the heading "What type of thing do you want to teach the computer to recognise?". The options listed are: "For words, sentences or paragraphs, choose "text"" (which is selected), "For photos, diagrams and pictures, choose "images"" (which is unselected), and "For sets of numbers or multiple choices, choose "numbers"" (which is unselected). At the bottom right of the form are two buttons: "CREATE" and "CANCEL".

- 7.** You should see “**shy panda**” in the list of your projects. Click on it.

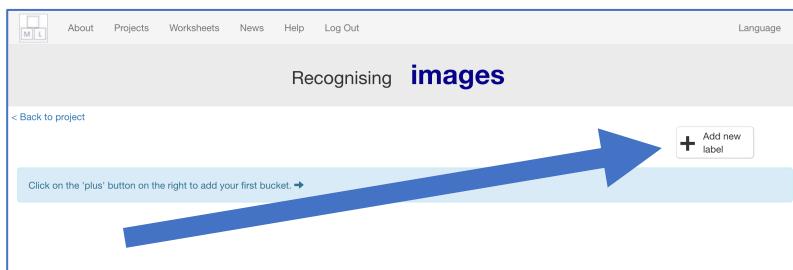

The screenshot shows a list of machine learning projects under the heading "Your machine learning projects". There are two projects listed: "shy panda" and "face lock". The "shy panda" project is highlighted with a large blue arrow pointing to its name. Both projects have a "Recognising images" status. The "shy panda" project also has a status of "Granted or denied". To the right of each project is a small trash can icon. At the top right of the list area is a button labeled "+ Add a new project".

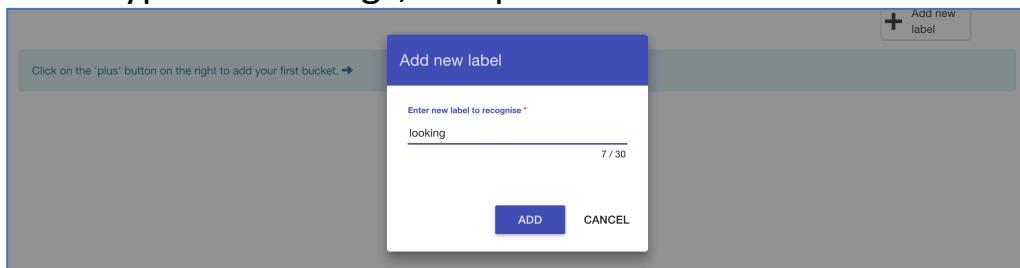

8. Click the Train button

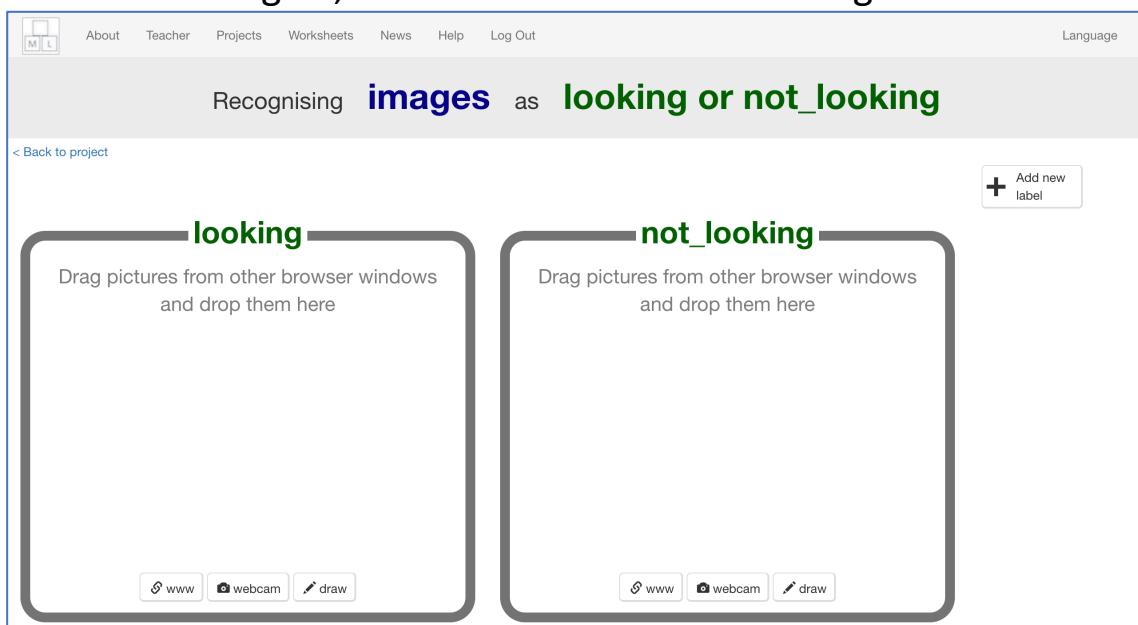

9. Click "+ Add new label"

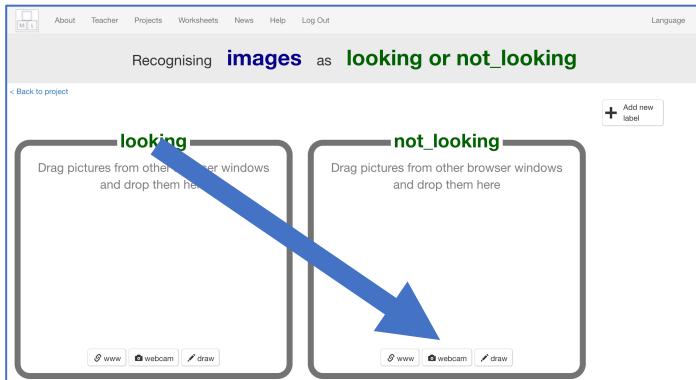

10. Type in "looking", and press Add

11. Do that again, but this time add "not looking"

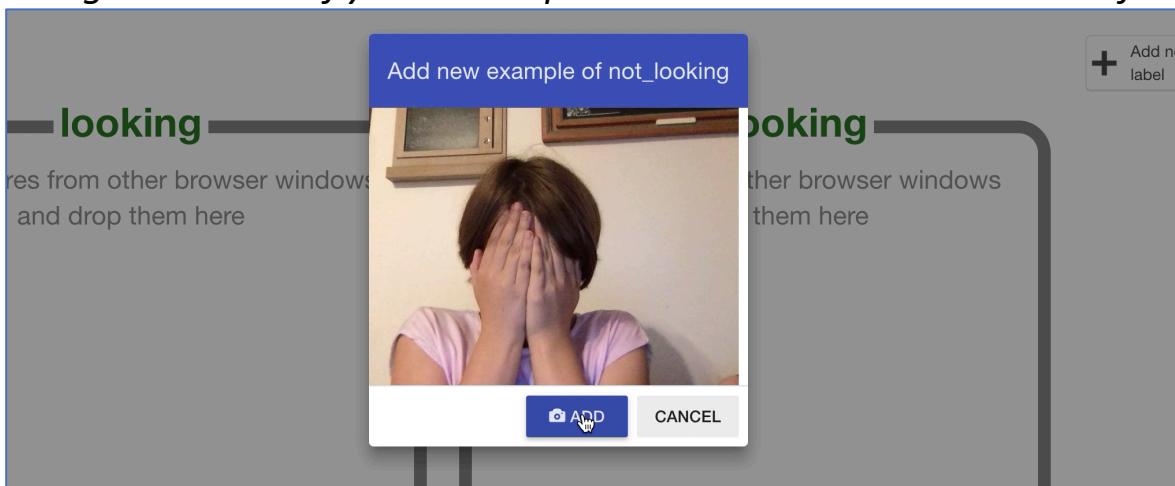

12. Click on the “webcam” button in the “not looking” bucket

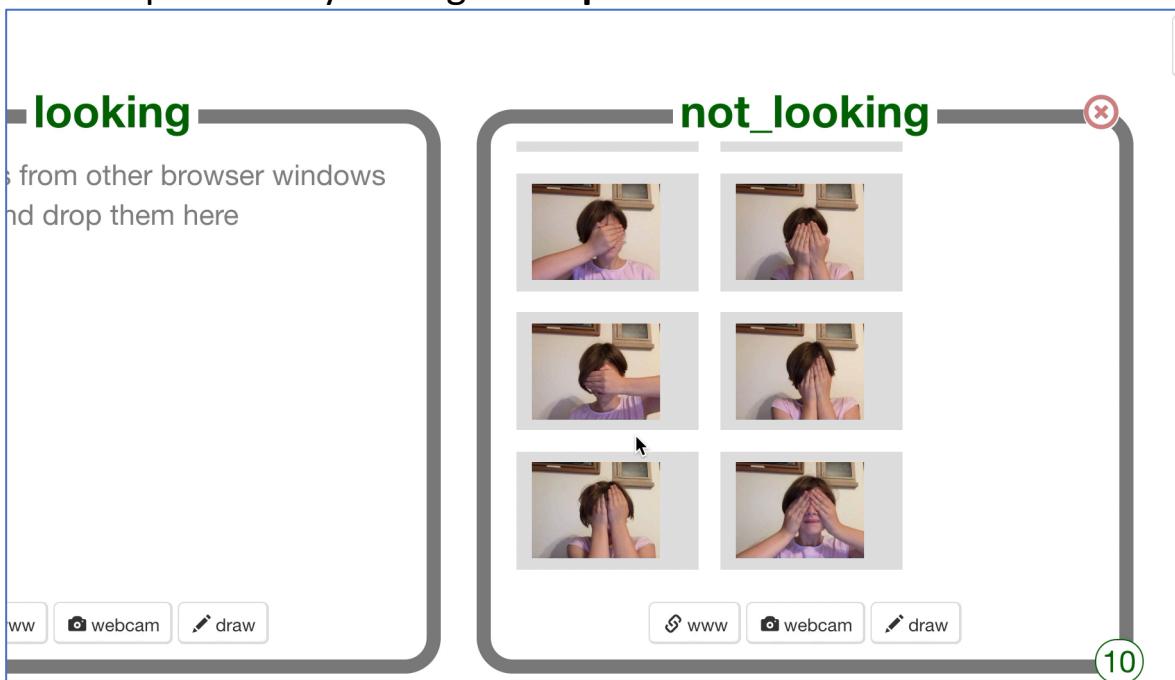

13. Cover your face with your hands, and take a photo

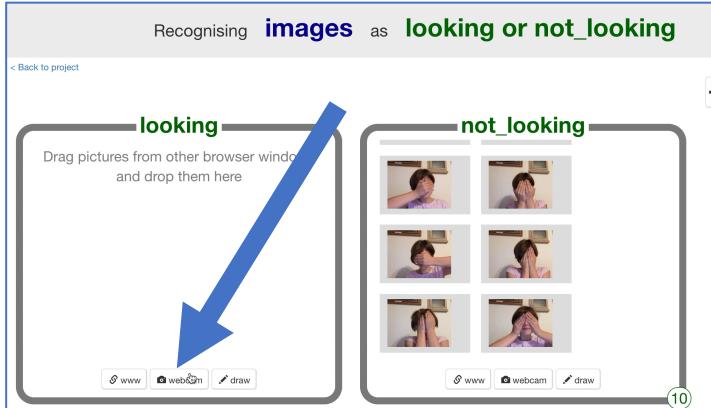

It might be easier if you have a partner to click the “Add” button for you!

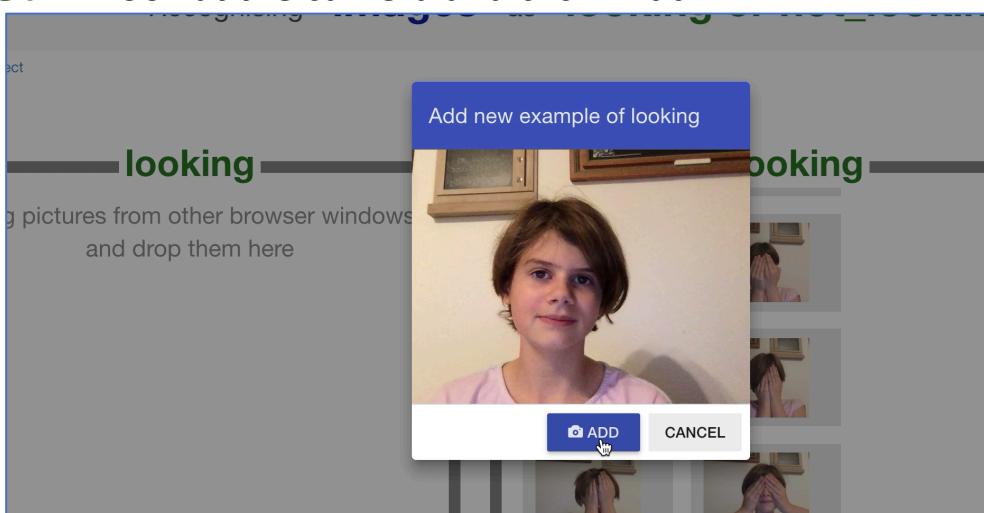

14. Repeat until you've got ten photos like this

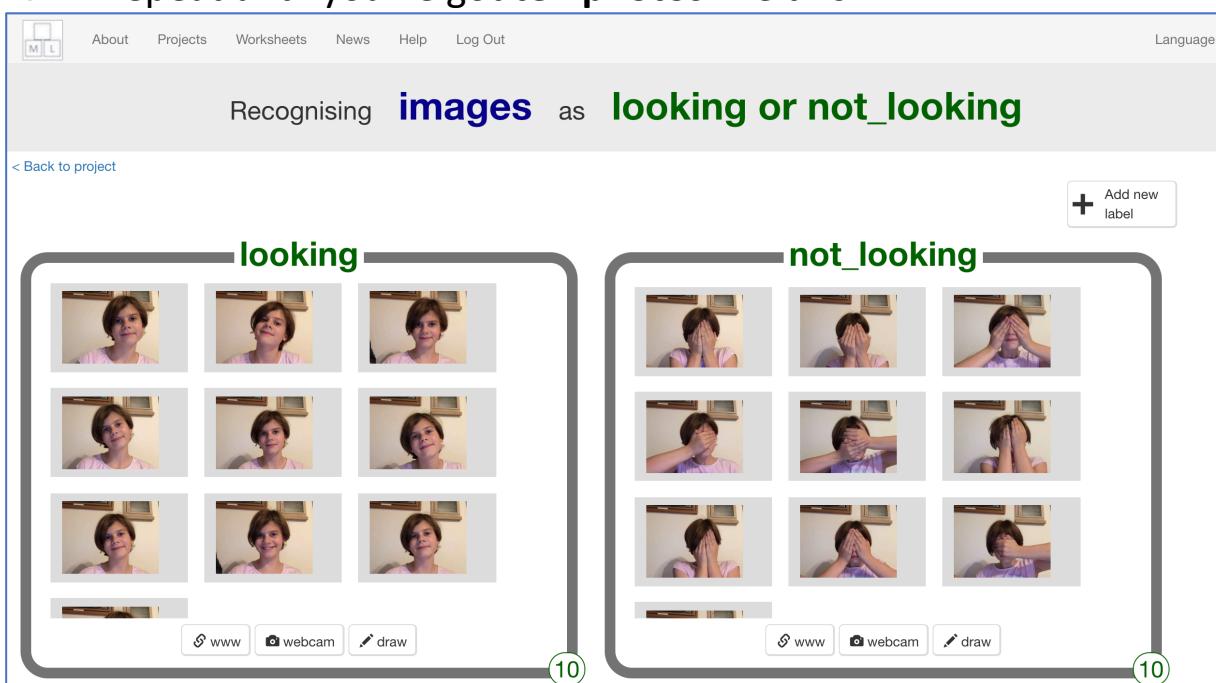

15. Click the “webcam” button in the “looking” bucket

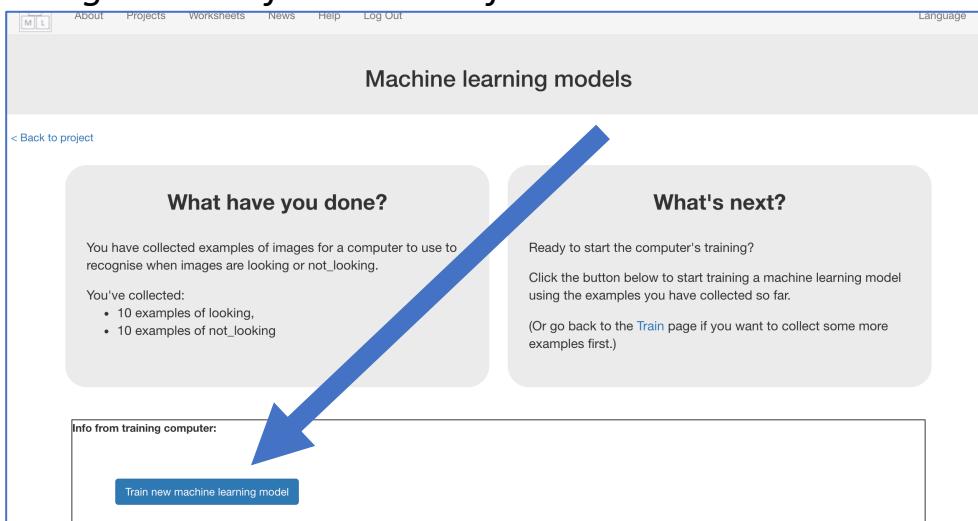

16. Look at the camera and click “Add”

17. Repeat until you've got ten photos like this

- 18.** Click “< Back to project”
- 19.** Click **Learn & Test**
- 20.** Click the “**Train new machine learning model**” button
It might take a few minutes for the model to train.

What have you done so far?

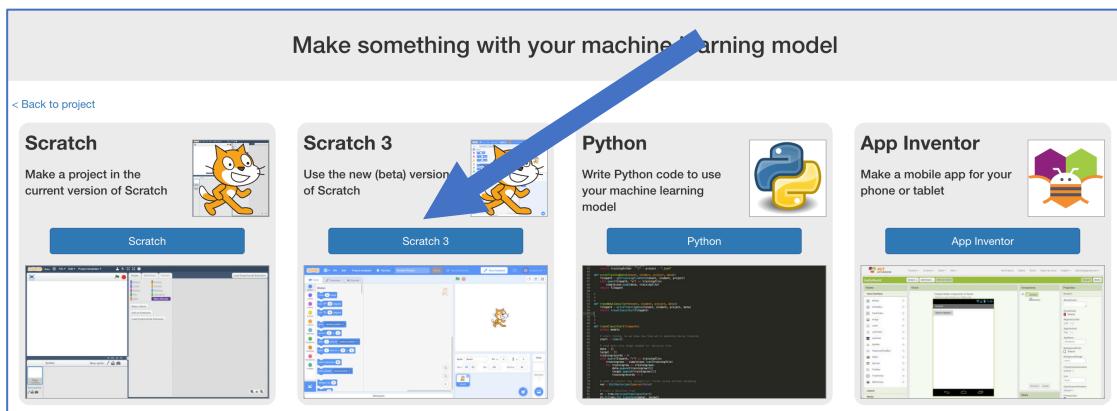

You've started to train a computer to recognise whether photos of a face and photos of a covered face. You are doing it by taking example photos. These examples are being used to train a machine learning “model”.

This is called “supervised learning” because of the way you are supervising the computer’s training.

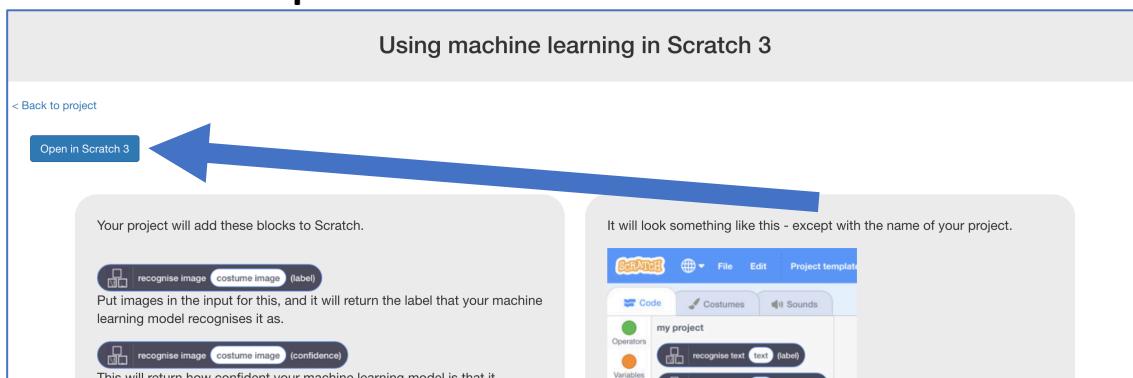

The computer will learn from patterns in the shapes from each of the photos you’ve given it. These will be used to recognise new photos.

- 21.** Click “< Back to project”
- 22.** Click the “**Make**” button

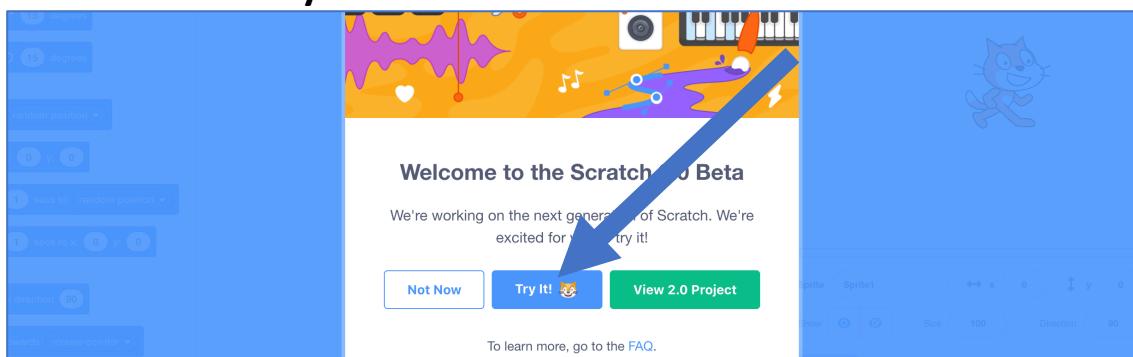

23. Click “Scratch 3”

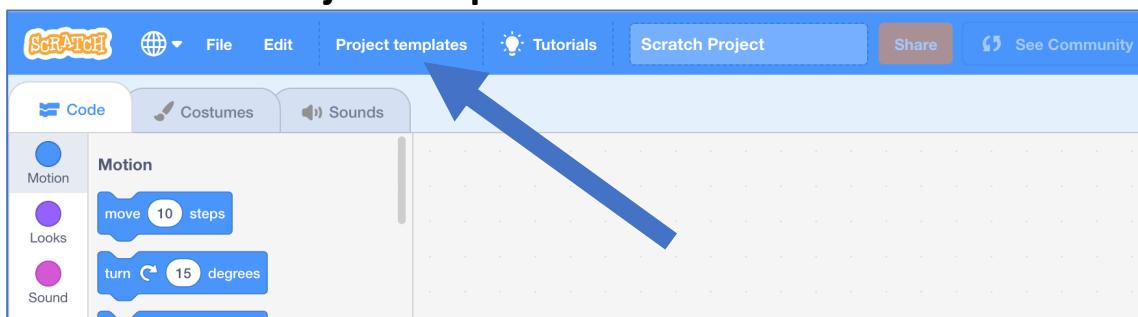

24. Click on “Open in Scratch 3”

25. Click on “Try it!”

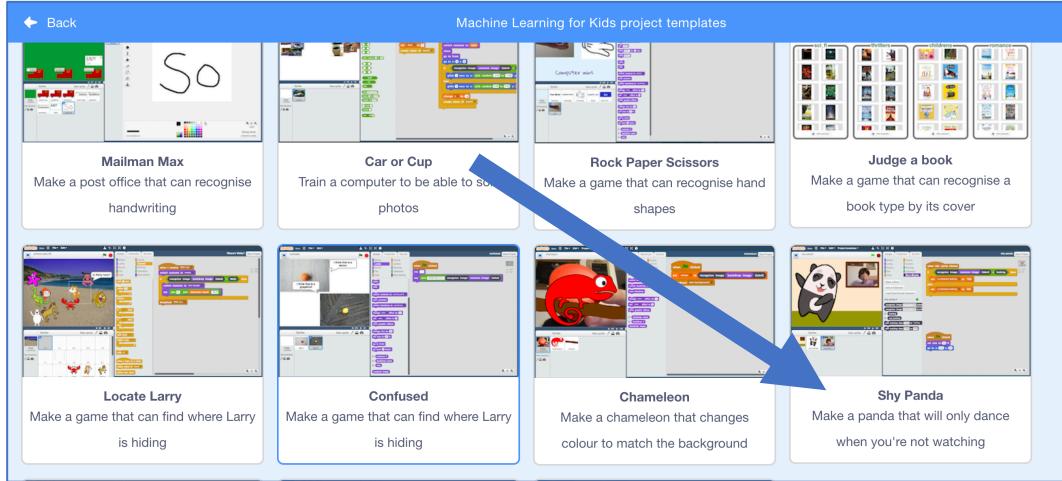

26. Click on “Project templates”

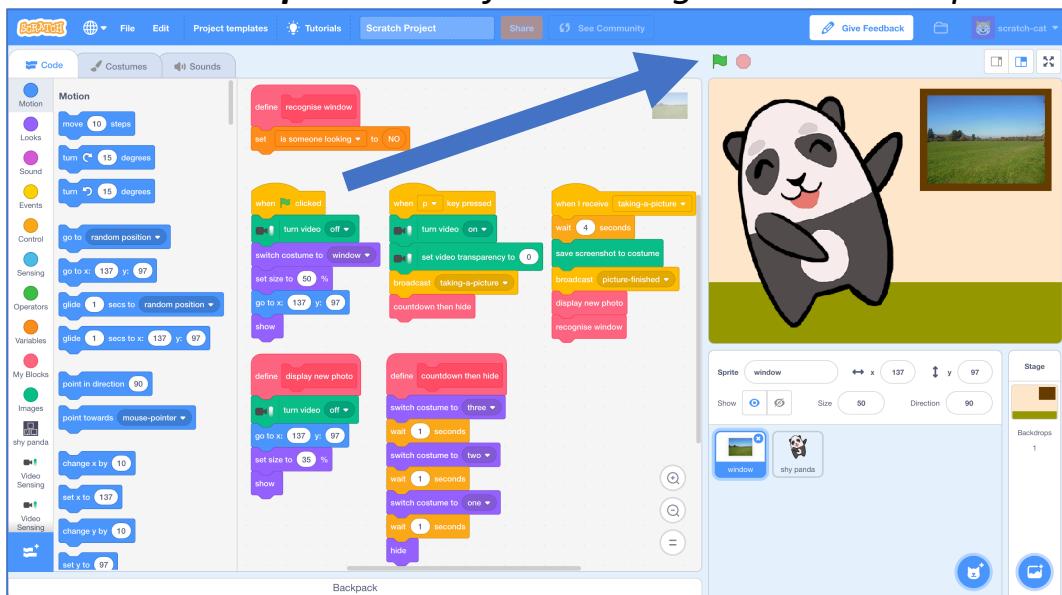

27. Click on the “Shy Panda” template

You might need to scroll down to it
If your browser asks for permission to use the web-cam, click **Allow**

28. Click on the Green Flag to see the panda dance!

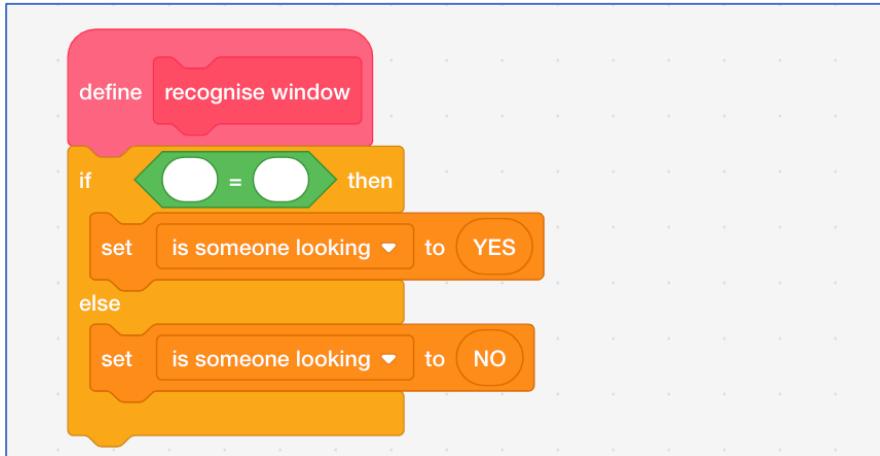

Click the **red stop button** before moving to the next step.

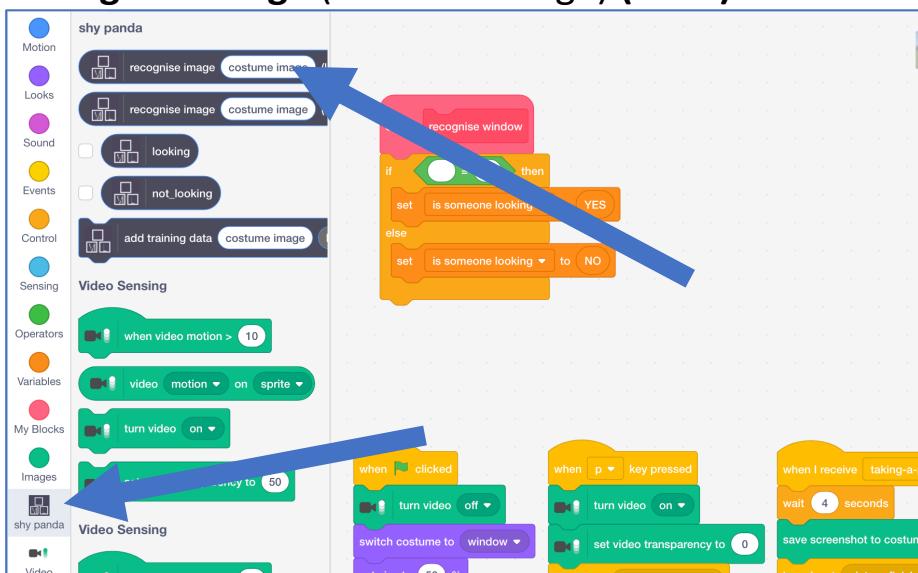

29. Find the “recognise window” script in the “window” sprite

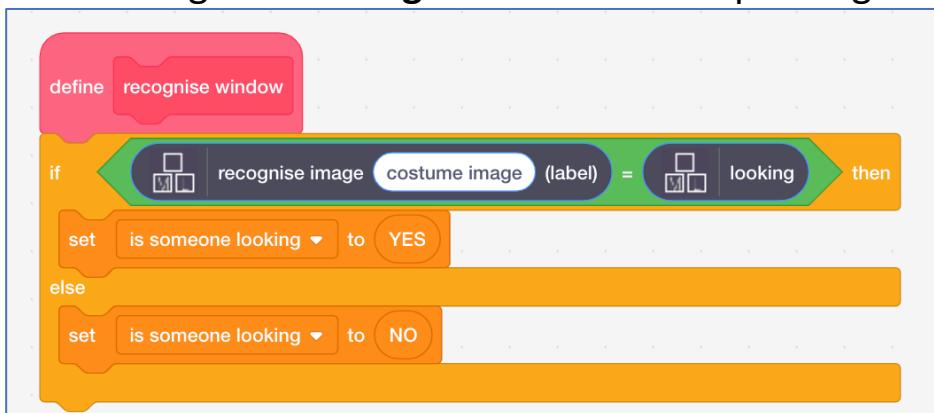

30. Change the “**recognise window**” script so that it looks like this
*If you’re new to Scratch 3, don’t worry as it’s very similar to Scratch 2.
Scroll through blocks in the toolbox on the left to find the blocks you need.*

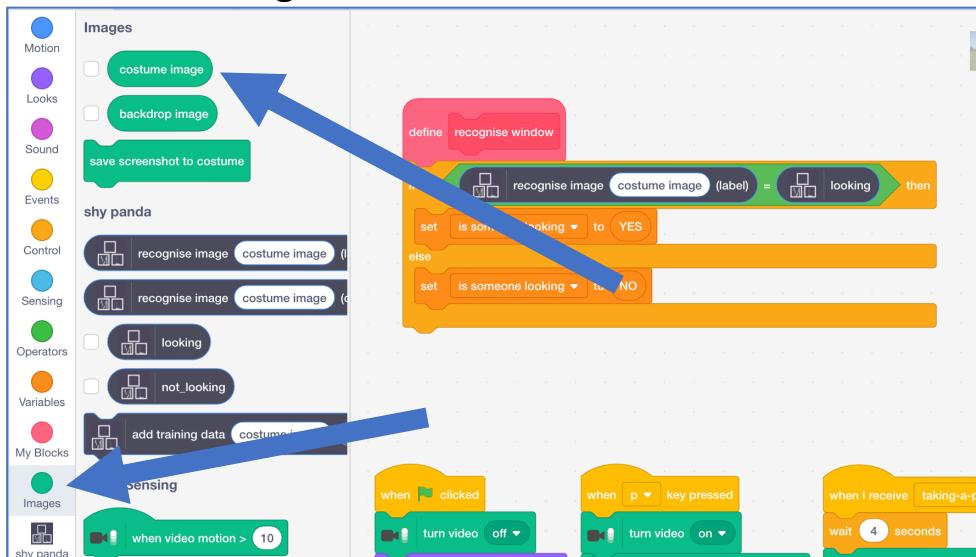

31. Click on “shy panda” in the toolbox and then find the “**“recognise image (costume image) (label)**” block

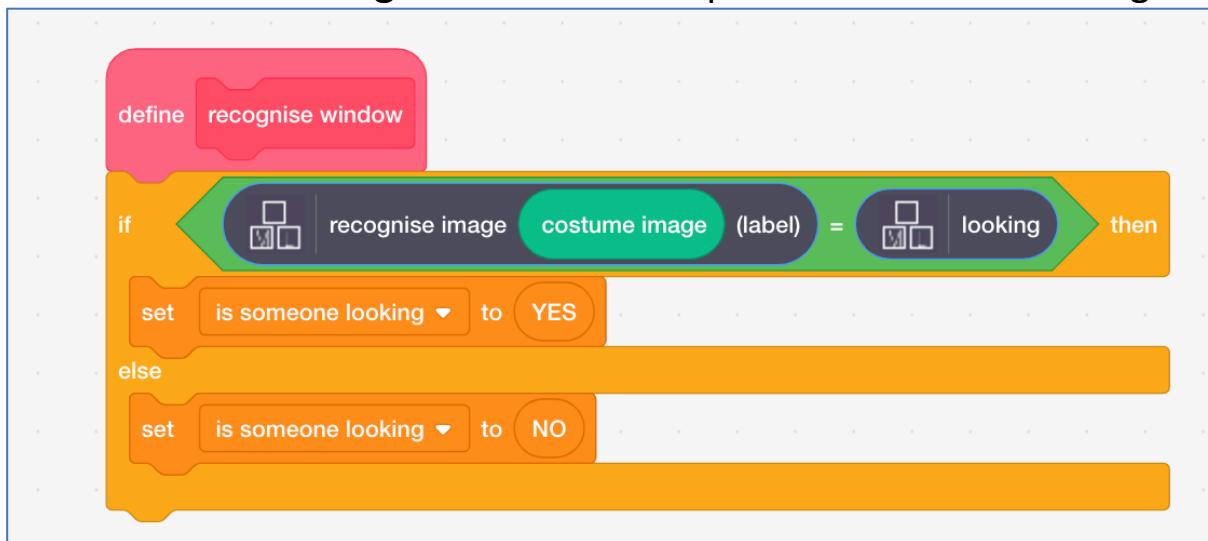

32. Change the “**recognise window**” script using “**shy panda**” blocks

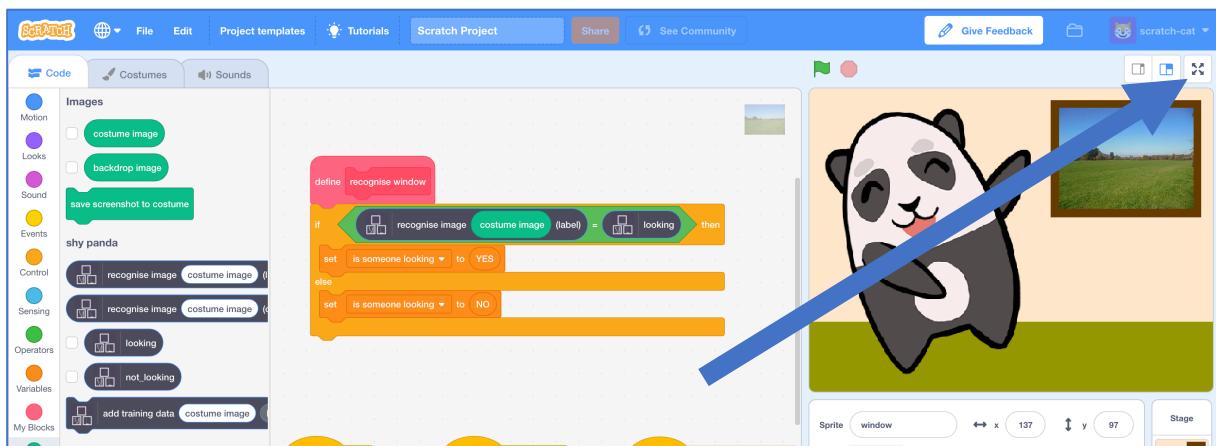

33. Click “images” in the toolbox and find the “costume image” block

34. Finish the “recognise window” script with the costume image block

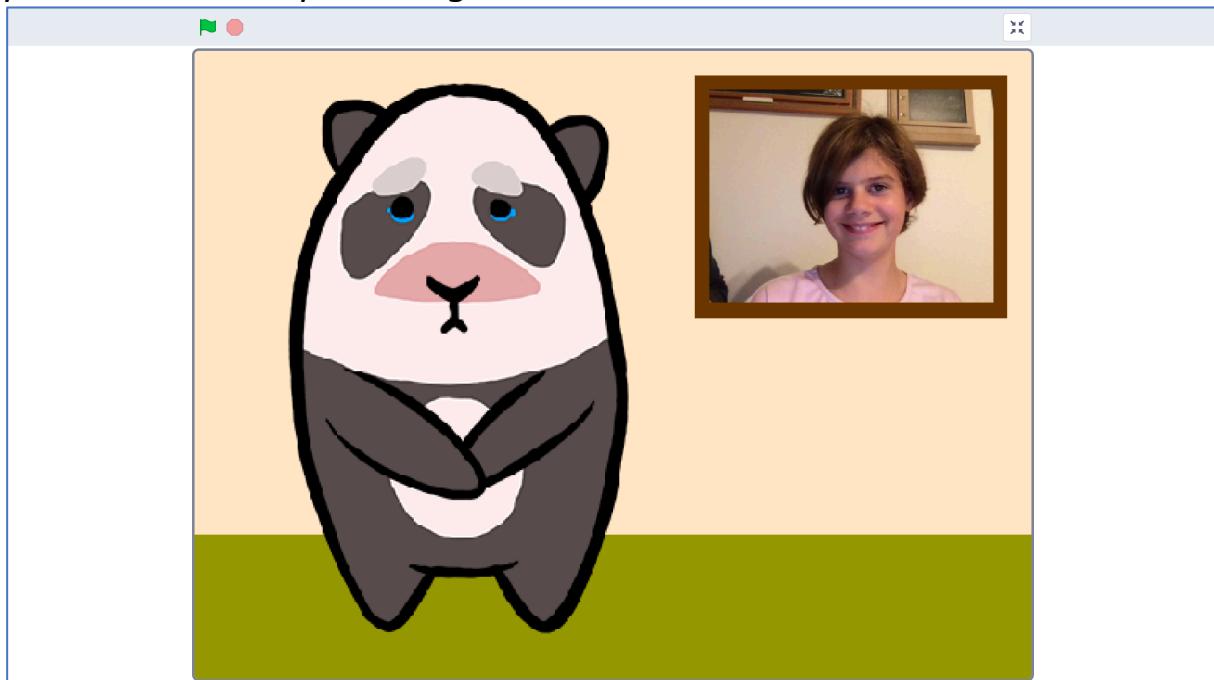

35. Click the full-screen button

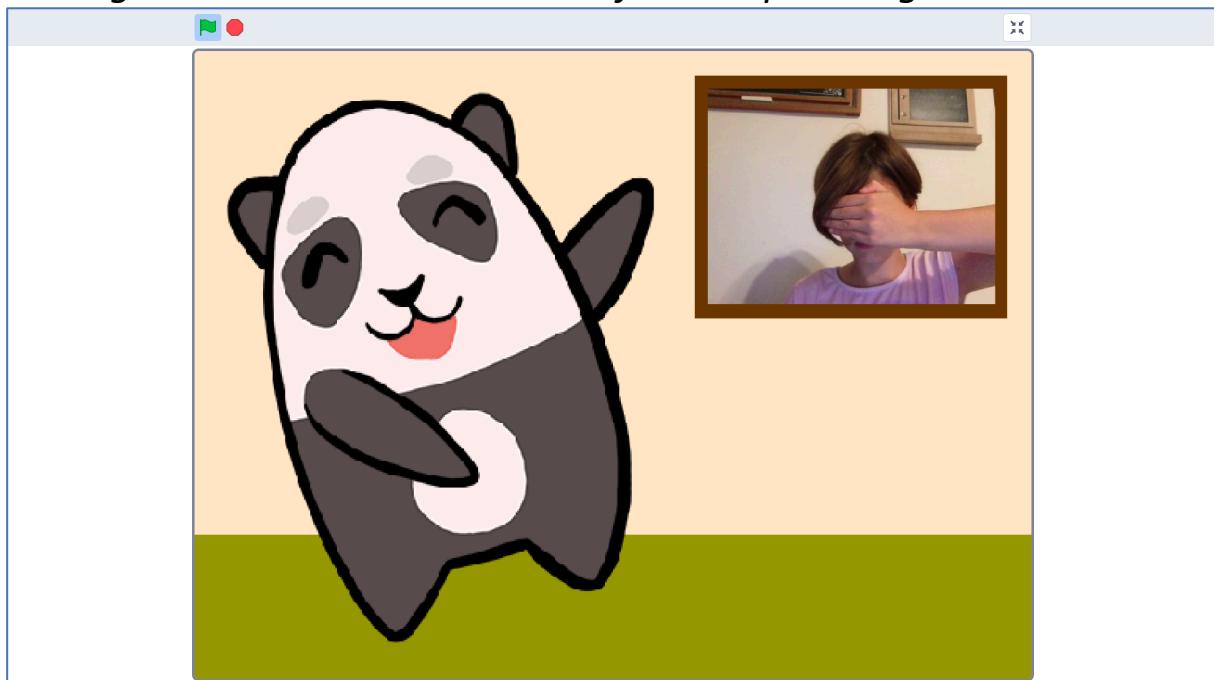

36. Click the **Green Flag** to start the panda dancing again

37. Press “**P**” on your keyboard to take a picture of yourself looking in
You'll get a 3-second countdown before the photo is taken
If your machine learning model recognises the photo as “looking”, the panda should stop dancing and look embarrassed!

38. Press “**P**” again to take a second photo. This time cover your face.
You'll get a 3-second countdown before the photo again.

39. The panda should start dancing again, as your machine learning model will recognise that you're not looking.

40. Save your project

Click the full-screen button again

Click “File” -> “Download to your computer”

What have you done?

You've created a shy panda in Scratch that uses machine learning to recognise whether the view at the window is a picture of you looking in.

The machine learning model that you've trained is an image classifier, that is able to classify photos as one of two classes – either looking or not looking.

The more examples you give it, the better it should get at recognising whether or not you're looking at it.

Ideas and Extensions

Now that you've finished, why not give one of these ideas a try?

Or come up with one of your own?

Draw your own character

You don't have to use the panda in the project template. Why not draw your own character? You'll need two sprites to be able to animate it dancing, and a third sprite of it looking shy.

Improving your training

Try testing it with your classmates. Does the panda still behave correctly?

What about if there's no one there at all?

How can you improve the training so that the panda does the right thing for these sorts of cases?
