

AI technology in *Machine Learning for Kids* is provided by Watson services in IBM Cloud.

This means you need to create an IBM Cloud account and create some Watson services to add to your *Machine Learning for Kids* class.

## **Creating an IBM Cloud account is free.**

Creating “**Lite Plan**” Watson services is **free**, but have restrictions on the number of machine learning models you can create with them.

Creating “**Standard Plan**” Watson services increases these restrictions.  
When you sign up you are given \$200 credit to get started and pay per use after that.

This document gives you step-by-step instructions for how to do all of this.

1.  
Create your IBM Cloud account

2.  
Create credentials for text projects

3.  
Create credentials for images projects

4.  
Billing

Pricing Plans are next.

The number of “Dialog Skills” is how many machine learning models your students can have (at once) for their text projects.

If you have 10 students, and you want them to all be able to train their own text projects at the same time, then you will need 10 dialog skills.

With the Lite plan, an instance of Assistant will let you have 5 dialog skills.

Using the ML model from Scratch projects is Free in the Lite Plan (up to 10,000 times per month)

The “Standard” plan lets you have up to 20 dialog skills.

Each instance of the Standard Plan service will support up to 20 students training machine learning models for their text projects at once.

Or... 10 students each training machine learning models for two of their text projects at once.

Or... 5 students each training machine learning models for four of their text projects at once.

Using the ML model from Scratch projects costs £0.001756 in the Standard Plan every time you use the model to recognise some text.

Monthly prices shown are for country or region: [United States](#)

PLAN	FEATURES	PRICING
Lite	<p>1,000 Events per month towards:</p> <ul style="list-style-type: none"><li>Pre-trained model classification (General, Face, Food, Explicit) (images)</li><li>Custom Model classification (images)</li><li>Custom Model training (images)</li><li>2 Custom Models</li><li>1 Lite Plan instance per IBM Cloud Organization</li><li>Free Exports to Core ML</li></ul>	Free
Standard	<p>Image Tagging Events Pay per Use</p> <ul style="list-style-type: none"><li>Face Detection Events Pay per Use</li><li>Training Events Pay per Use</li><li>Custom Tagging Events Pay per Use</li><li>Food Tagging Events Pay per Use</li><li>Explicit Tagging Events Pay per Use</li></ul>	<p>\$0.002 USD/General Tagging Event</p> <p>\$0.004 USD/Facial Recognition Event</p> <p>\$0.10 USD/Training</p>

The Lite Plan gets you started with 1,000 events (images) per month and the ability to train two Custom Models. Users wishing to use more premium features or increase usage must upgrade to a Standard Plan or a Subscription Plan.

Lite plan services are deleted after 30 days of inactivity.

Pricing Plans are at the bottom.

The Lite plan will only let you create two machine learning models for images projects.

Using the ML models from Scratch projects is Free in the “Lite” Plan (up to 1000 times per day)

Pricing Plans are at the bottom.

With the “Standard” plan, creating machine learning models for images projects will cost \$50 or £35.13 per month.

You can train as many models as you like during the month.

The total number of training images for all of these models must not exceed 100,000.

Using the ML model from Scratch projects costs £0.00121 in the Standard Plan every time you use the model to recognise an image.

Curl Go Java Node More

## Getting started tutorial

Last Updated: 2019-03-19

This tutorial guides you through how to use some built-in models in IBM Watson™ Visual Recognition to classify an image and then detect faces in an image.

Tip: If you prefer to work in a graphical interface, use Watson Studio. [Launch the tool](#) and follow the [video](#).

Before you begin

- Make sure that you have the `curl` command.
  - Test whether `curl` is installed. Run the following command on the command line. If the output lists the `curl` version with SSL support, you are set for the tutorial.

1. Create your IBM Cloud account  
2. Create credentials for text projects  
3. Create credentials for images projects  
4. Billing

This is the confirmation screen once you've created your Watson Visual Recognition instance.

Click the “Service Credentials” link on the left side menu.

To recap, the prices...

1.  
Create your IBM Cloud account

2.  
Create credentials for text projects

3.  
Create credentials for images projects

4.  
Billing

These prices are correct at the time of writing, and are provided as an indicative guide. For the definitive prices, refer to the prices shown in the IBM Cloud catalog.

Prices here quoted for the UK.

The IBM Cloud catalog will show prices in other currencies for users not in the UK.

## Imagine...

You have a class of **30 children**

They share computers (two children to every computer) so you will have 15 computers and 15 student accounts logged in to machinelearningforkids.co.uk

You choose a project worksheet for the class that involves recognising **text**

An example of IBM Cloud costs for a single Machine Learning for Kids class

Example 1:  
A large class working on a text project

## You could...

You create **three (3) x Lite Plan** instances of the Watson Assistant service

This will allow all fifteen pairs to train machine learning models  
(each Lite Plan allows up to 5 machine learning models)

## That means...

There is **no charge** for Lite Plan services.

1.  
Create your IBM Cloud account

2.  
Create credentials for text projects

3.  
Create credentials for images projects

4.  
Billing

These prices are correct at the time of writing, and are provided as an indicative guide.  
For definitive prices, refer to prices shown in the IBM Cloud catalog.

## Imagine...

You have a class of **30 children**

You will have 30 computers and 30 student accounts logged in to [machinelearningforkids.co.uk](http://machinelearningforkids.co.uk)

You choose a project worksheet for the class that involves recognising **images**

An example of IBM Cloud costs for a single Machine Learning for Kids class

## You could...

You create **one Lite Plan** instance of the Watson Visual Recognition service

You create a “whole class project” for your class, so all your students work together to contribute to the training of a single machine learning model.

They all collect their training data at the same time. You as the teacher will be the one who clicks the “Train new machine learning model” button. They can all use the machine learning model from Scratch at the same time.

## That means...

There is **no charge** for Lite Plan services.

1.  
Create your IBM Cloud account

2.  
Create credentials for text projects

3.  
Create credentials for images projects

4.  
Billing

These prices are correct at the time of writing, and are provided as an indicative guide.  
For definitive prices, refer to prices shown in the IBM Cloud catalog.

## Imagine...

You have a coding club of **6 children**

They share computers (two children to every computer) so you will have 3 computers and 3 student accounts logged in to machinelearningforkids.co.uk

You choose a project worksheet for the class that involves recognising **images**

An example of IBM Cloud costs for a single Machine Learning for Kids class

## You could...

You create **one Lite Plan** instance of the Watson Visual Recognition service

You ask your students to **take turns** to train machine learning models each using 30 example images.

They all collect their training data at the same time, but they need to wait to click the “Train new machine learning model” button one at a time

## That means...

There is **no charge** for Lite Plan services.

1.  
Create your IBM Cloud account

2.  
Create credentials for text projects

3.  
Create credentials for images projects

4.  
Billing

These prices are correct at the time of writing, and are provided as an indicative guide.  
For definitive prices, refer to prices shown in the IBM Cloud catalog.

## Imagine...

You have a class of **36 children**

They share computers (two children to every computer) so you will have 18 computers and 18 student accounts logged in to machinelearningforkids.co.uk

You choose **3 project worksheets** for the class that all involve recognising **images**

## You could...

You create **one Standard Plan** instance of the Watson Visual Recognition service

You plan 3 lessons - one per week, for 3 weeks. You plan to ask your class to do one worksheet each lesson.

In each lesson, you ask your students to train machine learning models each using 30 example images.

In each lesson, you let them each test their machine learning models 10 times.

## That means...

Your students will train 54 machine learning models across all 3 lessons (18 students x 3 worksheets)

They will use a total of 1,620 training images across all 3 lessons (18 students x 30 images x 3 worksheets)

Training their machine learning models will be covered by the £35.13 monthly cost.

Testing their models will cost approx £0.87 (18 students x 10 images x 3 worksheets x £0.001617 cost)

Cost for all three lessons could total approx £36

An example of IBM Cloud costs for a single Machine Learning for Kids class

Example 4:  
A large class working on images projects over three lessons

These prices are correct at the time of writing, and are provided as an indicative guide.

For definitive prices, refer to prices shown in the IBM Cloud catalog.

Prices here quoted for the UK.

The IBM Cloud catalog will show prices in other currencies for users not in the UK.
